

# RemoteComply™ Risk Management Suite

Did you know that businesses that remain inoperable after seven days are 60% more likely to go out of business within the same year? RemoteComply can prevent this from happening. RemoteComply is a new Risk Management Suite consisting of four integrated products that will help you manage all of your business recovery needs.

**RemotePlan™** is version 2.0 of our business continuity planning software previously known as RPMs. It is an automated system which creates BIA reports and a disaster recovery plan organized by departmental levels.

**RemoteNotify™** is an alert notification software which allows you to email, text message, and audio call groups of contacts to be notified in the event of a disaster.

**RemoteVendor™** is a vendor management software which allows you to track contact details, log contract dates, evaluate levels of risk, and report due diligence for individual vendors.

**RemoteIncident™** is an incident management software which allows you to log incidents with start and end dates, categorize incidents by type and choose our standard templates or customize your own.

## **About Specialized Data Systems**

Specialized Data Systems, Inc. is a software development company that provides technology solutions to banks and credit unions. Since 1989, we have been committed to providing "best of breed" products and services to financial institutions.
