

RemoteComply® Risk Management Suite

Did you know that businesses that remain inoperable after seven days are 60% more likely to go out of business within the same year? RemoteComply can prevent this from happening. RemoteComply is a new Risk Management Suite consisting of four integrated products that will help you manage all of your business recovery needs.

RemotePlan® is an automated business continuity planning system which allows you to build and maintain departmental BIAs, a complete disaster recovery plan, and testing activities.

RemoteNotify® is an alert notification software which allows you to email, text message, and audio call groups of contacts to be notified in the event of a disaster.

RemoteVendor® is a vendor management software which allows you to track vendor contact details, log contract dates, evaluate levels of risk, and monitor due diligence.

RemoteIncident® is an incident response software which allows you to organize and manage the aftermath of a security breach or attack including task status updates and built in alerts.

About RemoteComply

RemoteComply is a web based risk management suite consisting of four individual products which can be purchased separately or together as a suite. The suite is available on all devices including mobile, tablet, and desktop to ensure that your information can be accessed anywhere in any situation. The products integrate together eliminating double data entry and allowing shared functionalities for easy usage.

About Specialized Data Systems
